NOTES:

"Light Count" cells highlighted in yellow indicate overhead electric wiring connected to a wooden pole and bracketed luminaire.

"Light Count" cells without yellow highlight indicate underground electric wiring connected to a wooden pole and bracketed luminaire.

"Pole ID #" listed as To Be Determined (TBD) since Ameren assigns pole identification placards.

"Component Type" listed as TBD since exact component must be decided as: 100 W Ameren wooden pole with bracketed luminaire; 100 W Ameren fiberglass pole with post top lantern luminaire; or 66 W Brentwood ornamental luminaire (like on Litzsinger).

"Priority" was estimated using lowest lux value as first parameter and total cost as second parameter.
